EDUCATION

University of Kentucky
Department of Computer Science
Ph.D. in Computer Science
Advisor : Nathan Jacobs
GPA : 3.9/4.0

Lexington, KY, USA
Aug. 2017 - Dec. 2022 (expected)

Northeastern University
School of Computer Science and Engineering
B.E. in Telecommunications

Shenyang, China
Sept. 2013 - June 2017

APPOINTMENTS

Siemens Healthineers
Image Analytics Intern

Malvern, PA, USA
May 2022 - Aug. 2022

- Developed a self-supervised learning framework for point matching on 3D CT images.
- Upgraded the landmark-based detector by matching any points from varying follow-ups.
- Applied the framework to multiple CT datasets and reduced 97% training time while maintaining the performance.

University of Kentucky
Research Assistant

Lexington, KY, USA
May 2019 - Present

- Multi-domain semantic segmentation and depth estimation for unmanned aerial systems.
- Solved astrophysics problems using deep learning with imbalanced multi-modal data.
- Classification, detection, segmentation, and calibration on 2D and 3D medical images.

Teaching Assistant

Jan. 2018 - May 2021

- CS215 : Introduction to Program Design, Abstraction and Problem Solving
- CS216 : Introduction to Software Engineering Techniques
- CS371 : Introduction to Computer Networking

SKILLS

Experience : deep learning, computer vision, domain adaptation, depth estimation, multi-modal data modeling, 2D/3D medical image analysis
Programming : Python, PyTorch, MATLAB, C, C++

RESEARCH
SUMMARY**Multi-Domain Classification, Semantic Segmentation, and Depth Estimation**

- Designed a dynamic feature alignment framework the semi-supervised domain adaptation problem by minimizing divergence and pseudo-labeling [2].
- Addressed the problem of multi-target domain adaptation for depth estimation and improved the performance by using uncertainty estimation and knowledge distillation [1].
- Proposed a unified model for semantic segmentation for aerial imagery by learning a universal representation shared across multiple datasets with different label-spaces.

Medical Imaging Understanding with Limited Datasets

- Addressed the inconsistent performance of deep networks on mammogram classification [13]. Proposed a novel method for network calibration which addresses the problem of model overconfidence [6][16]. Bridged the domain gap by using a CycleGAN-based method [18].
- Adapted a self-training approach for the task of breast cancer localization using only image-level labels [7]. Improved the image interpretation performance by designing an image-text matching network using textual medical reports as a weakly-supervision signal [11].
- Made numerous improvements and our current architecture is now able to use the full 2D and 3D mammograms, significantly improving performance over the previous method which subsampled the 3D volume [19][9][8]. Applied both CNN-based [4] and transformer-based [3] architectures on multi-modal PET images for Alzheimer disease diagnosis.

Identifying Galaxy Clusters using Deep Learning

- Identified cool core, weak cool core, and noncool core clusters of galaxies that are defined by their central cooling times using CNNs [12], interpreted the results by using class activation maps, and further improved the performance by using a multi-branch attention network [5].
- Proposed a self-supervised approach for estimating galaxy cluster masses from multi-band optical images using transfer learning [15][10].

AWARDS

- Conference Travel Grant, University of Kentucky, 2019
- ATS Fellowship, University of Kentucky, 2017-2018

SERVICE

- Reviewer for IEEE Transactions on Pattern Analysis and Machine Intelligence (TPAMI)
- Reviewer for IEEE Transactions on Circuits and Systems for Video Technology (TCSVT)
- Reviewer for IEEE Winter Conference on Applications of Computer Vision 2020, 2022
- Reviewer for The British Machine Vision Conference 2020, 2021
- Reviewer for Imaging Science Journal 2022

MEMBERSHIPS

- Institute of Electrical and Electronics Engineers (IEEE), Student Member
- Society for Imaging Informatics in Medicine (SIIM), Student Member
